

(Internal only) Teleconference with Hartz Mountain Industries to discuss TCVP pet products.

On April 24, 2020, PRD spoke with representatives of Hartz Mountain to discuss registered pet products containing tetrachlorvinphos (TCVP). The registrant asked about the status of the agency's revised human health draft risk assessment (HHdra). The agency anticipates issuing the revised HHdra for public availability in June 2020. Tetrachlorvinphos is an organophosphate insecticide registered for use in livestock, as a perimeter and residential use to treat fleas and ticks on cats and dogs. Formulations include pump sprays, powders, and pet collars. Hartz is the sole registrant for pet products containing TCVP.
